

EDGEWOOD NEIGHBORHOOD STORMWATER IMPROVEMENTS

Construction Advisory for Infrastructure Improvements

The City of Fort Lauderdale is investing \$14.5 million in the Edgewater neighborhood to dramatically reduce flooding, enhance reliability, promote neighborhood sustainability, and improve services. Crews from David Mancini & Sons, Inc., will be installing approximately 5.6 miles of reinforced concrete pipe, varying in diameter from 15 to 66 inches, with more than 350 concrete structures (pictured above). The end result will be more efficient stormwater collection and three additional areas for quicker water discharge. The project is anticipated to start in January 2022 and is expected to be finished by fall 2024.

During construction, there will be intermittent street closures and detours, but complete local access will still be possible. The attached map shows the phases of construction and the impacted streets.

Please follow posted signs and drive with caution in the area during construction. Thank you for your patience and cooperation as we work to upgrade the City's infrastructure.
